

## DECLARATION

Date :

We hereby declare the following with respect to the investigational product submitted for registration:

Product Name : Vibe bedtime Pain Comfort Socks

Product Description : **Comfort socks made with copper and activated carbon coated fabric technology for daily foot wellness and comfort. Suitable for men and women for regular use**

1. Material Description

The socks incorporate copper as a functional material intended solely for topical interaction with the skin. The product is not designed for systemic delivery.

2. Particle Size Classification

The copper used in the product is present in a micro-scale particulate form, with the particle size distribution lying entirely above the nanomaterial threshold.

No copper nanoparticles or engineered nanomaterials are used.

3. Surface Loading / Quantity

The copper is integrated within the textile structure with a controlled surface loading not exceeding 5000 mg per square meter (mg/m<sup>2</sup>).

This value represents the maximum exposure limit and has been selected to remain well within established dermal safety margins.

We confirm that the above information is true and accurate and is provided to support registration
